Visibility

Mobius InSight

Actionable Business Intelligence

Fleet operators and transportation managers are constantly working to optimize their trucking and delivery operations. Maximizing productivity and efficiencies to reduce costs without sacrificing customer service is a continual challenge. To make smart business decisions, leading fleet managers are adding visibility, measurement and management across their fleet, much like their business counterparts have throughout their supply chain.

Fleet Operations Dashboards

Mobius InSight is a business intelligence application that provides the ability to measure and analyze key indicators and trends to optimize fleet performance across the extended supply chain. Mobius InSight dashboards allow an at-a-glance visualization of delivery operations health by monitoring key performance indicators (KPIs) in the areas of Safety, Customer Service, Compliance, Maintenance and Cost. Through a web portal, dashboards can be created for each role across the organization as well as for delivery customers to monitor where & when they can expect their deliveries to arrive.

Alerting

Manage your customers and your fleet proactively. Exception-based decisions can be made through real-time alerts triggered whenever a user defined condition is met. Alerts can be displayed on the dashboard, sent to an email address, or any mobile device. Delivery delays, out of route vehicles, unknown stops, speeding, idling and any other performance metric can now be delivered to the appropriate owner with information that is actionable.

Drill-down

From the dashboard, detailed information is available by clicking on key fields or areas on a graph or report to drill into more information. Multiple levels of granular information are available to diagnose root cause relationships and appropriate corrective actions.

Features

- Driver Performance Scorecards
- Configurable KPIs with Custom portlets
- Role-based Views
- Pre-configured Dashboards
- Drill-down to Reports
- Customer Portals
- Exception-based Alerts

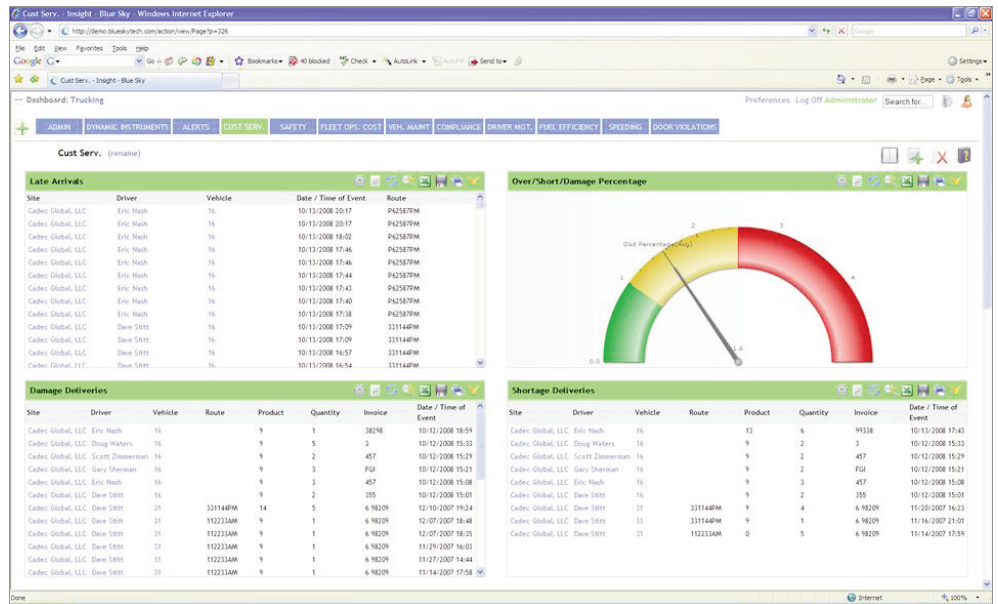

Benefits

- Real-time interactive/actionable Information delivered to the appropriate owners
- Translate Operations Data Into Business Intelligence
- Track and analyze performance trends
- Manage by exception with immediate awareness of issues
- Normalize data across your fleet operation
- Translate data into actionable, business-relevant information
- Add Metrics and Scorecards easily

Mobius InSight Performance Indicators

Key Performance Indicators

- Safety
 - Speeding
 - Sudden Decels
 - DOT Violations
 - Unknown Stops
 - Accidents
- Fleet Ops Cost
 - Idle time
 - Out of route miles
 - MPG
 - Laden/Unladen Miles
 - OSDs
- Vehicle Management (optimize vehicle utilization – Over/Under)
 - # of trucks available/used
 - By site
 - # of trailers available/used
 - By site
 - MPG
 - Total miles driven per vehicle (high, med, low mileage)
- Driver Management
 - Speeding violations
 - Idle time
 - On-time/Late arrivals
 - Unknown stops
 - Out of route miles
 - Accidents
 - Delivery accuracy (OSDs)
- Identify and resolve bottlenecks and high-cost processes within delivery operations
- Seamless navigation between business and operational metrics

Mobius Insight provides visibility into the delivery operation, allowing fleet managers to monitor, measure and communicate their performance against targets based on business objectives. Business owners can evaluate fleet performance across business units, locations, subsidiaries, regions, drivers and more.
